# Gold Standard

The Worldwide Standard in Torque Verification

The Gold Standard is designed to quickly verify the calibration and repeatability of the Cap Inspector and Test-All II series of torque test systems.

Variable  
Cap Sizes

The Gold Standard can be configured into the shape of a device so as to fit into Vibrac's standard tooling packages. It is fitted with a head piece designed according to the customer's testing requirements. It can also be fitted with a handle for non-motorized applications.

The Bottle is constructed using high-energy permanent magnets and heavy-duty bearings to insure the long-term durability and accuracy of this calibration standard. Each

## SPECIFICATIONS

### Gold Standard — Small

Torque Range: 1-6 in-lbs  
Repeatability: +/- 2.0%

### Gold Standard – Medium

Torque Range: 7-16 in-lbs  
Repeatability: +/- 2.0%

### Gold Standard – Large

Torque Range: 17-35 in-lbs  
Repeatability: +/-2.0%

Gold Standard is labeled with its exact torque rating and is supplied with a certificate of calibration and traceability. When used on a daily, weekly, or monthly schedule, the accuracy of the user's test results can be assured.
